

- The KOF Economic Barometer drops by 0,9 points in April 2019, from 97,1 (revised from 97,4) to an index value of 96,2. The Barometer value is still clearly below average. The decline is largely due to the indicators for the manufacturing sector. In addition, the indicators for the construction industry are slightly declining.
- SECO: Swiss consumer sentiment has worsened slightly. In April 2019, the index, which lies at -6 points, now comes in only just above average (-9 points). The labour market has still been assessed positively. However, the likelihood of consumers making major purchases remains low. In terms of general economic development, consumers have shown similar levels of optimism to the previous quarter, which indicates a continuation of the now only moderate economic growth.
- After the PMI of procure.ch/Credit Suisse had already fallen by 5,1 points in the previous month, it lost another 1,8 points in April 2019 and closed below the growth threshold at 48,5 points. The PMI fell below 50 points for the last time at the beginning of 2015. As in 2015, there are many indications at the beginning of 2019 that the causes can be found in Europe.
- FCA: In Swiss foreign trade, the two traffic directions developed in opposite directions in the 1st quarter of 2019. Seasonally adjusted exports declined slightly, but remained above the 57 billion Swiss francs mark. Imports, on the other hand, increased again (+1,0 percent), reaching the record level of 51,2 billion francs.

5 KOF economic barometer

– The KOF Economic Barometer drops by 0,9 points in April 2019, from 97,1 (revised from 97,4) to an index value of 96,2. The Barometer value is still clearly below average. The decline is largely due to the indicators for the manufacturing sector. In addition, the indicators for the construction industry are slightly declining.

Note: The KOF Economic Barometer is a composite leading indicator for the Swiss economy. It comprises 219 variables which are combined based on statistically determined weights. It is one to two quarters ahead of the GDP growth rate of the previous year and thus enables an initial estimate to be made of how the Swiss economy will perform

Source: KOF, SECO.

6 Private consumption and consumer sentiment

– SECO: Swiss consumer sentiment has worsened slightly. In April 2019, the index, which lies at -6 points, now come in only just above average (-9 points). The labour market has still been assessed positively. However, the likelihood of consumers making major purchases remains low.

22 Real effective exchange rate index (CPI-based)

16.05.2019	Exchange rate
EUR	1.13
GBP	1.29
USD	1.01
JPY (100)	0.92

Note: The real effective exchange rate index measures the real external value of the Swiss franc, and is the nominal index adjusted for price developments in Switzerland and abroad. It is frequently used as an indicator for assessing the price competitiveness of an economy. A rise in the index value indicates a real appreciation in the Swiss franc. All of the real indices are also calculated on the basis of the producer price index (PPI).
Source: SNB.

23 EUR/CHF and Purchasing-Power Parity (PPP)

01.04.2019	PPP
PPP	1.20

Note: The concept of purchasing-power parity (PPP) can be used to determinate the fair value of a currency. Purchasing-power parity exists when different currencies have the same purchasing-power due to the exchange rate and therefore the same basket of goods can be purchased with one unit of currency. If the EURCHF PPP is higher than the EURCHF exchange rate, the CHF is overvalued.
