

- KOF: Following a difficult 2015 for the Swiss economy, the prospects for the coming year have improved. However, due to the global economic weakness and the structural adjustments in Switzerland that have been necessary as a result of the Swiss franc appreciation, gross domestic product will only grow by 1% this year. Unemployment in 2016 will grow slightly to 3,5%. However, prices will continue to fall.
- In March 2016, the KOF Economic Barometer practically hold its standing from February 2016. It now stands at 102,5 points, compared to 102,6 points in February (revised up from 102,4). The new standing of the Economic Barometer signals an ongoing positive development of the Swiss economy in the coming months.
- The UBS Consumption Indicator rose from 1,45 to 1,53 points in February 2016, indicating consistent, solid growth in private consumption. New car registrations remained high, but retailer sentiment was rather subdued.
- The procure.ch Purchasing Managers' Index (PMI) rose by 1,6 points in March 2016 and closed at 53,2 points. The PMI therefore stood at its highest level since October 2014 and well above the growth threshold of 50 points.
- According to SECO, the unemployment rate decreased from 3,7% in February to 3,6% in March 2016.

KOF economic barometer

(5)

- The KOF Economic Barometer is a composite leading indicator for the Swiss economy. It comprises 219 variables which are combined based on statistically determined weights. It is one to two quarters ahead of the GDP growth rate of the previous year and thus enables an initial estimate to be made of how the Swiss economy will perform in the next or in the next two quarters.

- In March 2016, the KOF Economic Barometer practically hold its standing from February 2016. It now stands at 102,5 points, compared to 102,6 points in February (revised up from 102,4). The new standing of the Economic Barometer signals an ongoing positive development of the Swiss economy in the coming months.

Real exchange rate indices, export-weighted

(23)

13.04.2016	Exchange rate
EUR	1.09
GBP	1.36
USD	0.96
JPY (100)	0.88

- The real external value of the Swiss Franc compared to the currencies of the most important trade partners of Switzerland is measured by the real export-weighted exchange rate index. It is often used as an indicator for the assessment of the price competitiveness of an economy. A fall in the exchange rate index means a depreciation of the Swiss Franc.

Source: SNB.

EUR/CHF and Purchasing-Power Parity (PPP)

(24)

01.12.2015	PPP
PPP	1.25

- The concept of purchasing-power parity (PPP) can be used to determinate the fair value of a currency. Purchasing-power parity exists when different currencies have the same purchasing-power due to the exchange rate and therefore the same basket of goods can be purchased with one unit of currency. If the EURCHF PPP is higher than the EURCHF exchange rate, the CHF is overvalued.
