

- SECO: The Expert Group is expecting moderate GDP growth of 1,2% for 2019. The weakening of the global economy is slowing down Swiss foreign trade, while the considerable uncertainty is weighing on investment activity. Economic growth is set to increase in 2020 and rise to 1,7%.
- Various positive developments have led to strong growth in the Swiss economy in the first quarter. On the other hand, the international environment has deteriorated. The biggest disruptive factor is the ongoing trade dispute between the USA and China, which is increasingly slowing down the real economy. BAK forecasts Swiss GDP growth of 1,2 percent for 2019 and 1,7 percent for 2020.
- In May 2019, the PMI of procure.ch/Credit Suisse closed at 48,6 points, marginally above the previous month's level (0,1 points), but for the second month in a row slightly below the growth threshold of 50 points.
- The SNB is introducing the SNB policy rate, which it will use in taking and communicating its monetary policy decisions. The SNB policy rate replaces the target range for the three-month Libor used previously, and currently stands at -0,75%. The SNB's monetary policy thus remains as expansionary as before. For 2019, the new conditional inflation forecast stands at 0,6%, up from the figure of 0,3% last quarter. For 2020, the SNB anticipates an inflation rate of 0,7%, compared to 0,6% last quarter.

4 Evolution of GDP (real) and unemployment rate

Note: The potential growth lies between 1,6% and 1,8%, according to calculations by Fahländer Partner; the values for 2019 and 2020 are forecasts; since June 2016, the unemployment rate is based on occupation numbers according to the pooling 2012-2014.

Source: figure 1, page 1, Fahländer Partner (growth potential).

5 KOF economic barometer

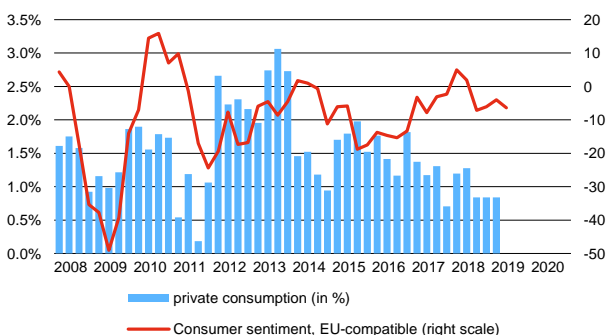

– The KOF Economic Barometer drops by 1,8 points in May 2019 to 94,4 points from 96,2 in April 2019. The majority of sets of indicators are tending downwards. The indicators for banking and insurance, consumption and foreign demand have developed negatively.

Note: The KOF Economic Barometer is a composite leading indicator for the Swiss economy. It comprises 219 variables which are combined based on statistically determined weights. It is one to two quarters ahead of the GDP growth rate of the previous year and thus enables an initial estimate to be made of how the Swiss economy will perform

Source: KOF, SECO.

6 Private consumption and consumer sentiment

– SECO: Swiss consumer sentiment has worsened slightly. In April 2019, the index, which lies at -6 points, now come in only just above average (-9 points). The labour market has still been assessed positively. However, the likelihood of consumers making major purchases remains low.

22 Real effective exchange rate index (CPI-based)

20.06.2019	Exchange rate
EUR	1.12
GBP	1.26
USD	0.99
JPY (100)	0.92

Note: The real effective exchange rate index measures the real external value of the Swiss franc, and is the nominal index adjusted for price developments in Switzerland and abroad. It is frequently used as an indicator for assessing the price competitiveness of an economy. A rise in the index value indicates a real appreciation in the Swiss franc. All of the real indices are also calculated on the basis of the producer price index (PPI).
Source: SNB.

23 EUR/CHF and Purchasing-Power Parity (PPP)

01.04.2019	PPP
PPP	1.20

Note: The concept of purchasing-power parity (PPP) can be used to determinate the fair value of a currency. Purchasing-power parity exists when different currencies have the same purchasing-power due to the exchange rate and therefore the same basket of goods can be purchased with one unit of currency. If the EURCHF PPP is higher than the EURCHF exchange rate, the CHF is overvalued.
